Professional prompting...
whenever...wherever...
For iPhone, iTouch, iPad

picoPrompt

Professional prompting...whenever...wherever...
For iPhone, iTouch, iPad

The ultra-portable personal teleprompter

picoPrompt transforms an iPhone, iTouch, or iPad, into an ultra-portable, personal, self contained professional speech prompter. An exciting new approach to iOS teleprompting, picoPrompt is a cost effective production tool suitable for all prompting applications. Now with a configurable VideoSelfie feature that is second to none for video conferencing, webcasts or social media.

News interface and auto-updates for location shoots

Using popular newsroom systems or an FTP site, scripts and updates can be sent automatically to a remote picoPrompt unit anywhere in the world.

iScroll – unique serial wired hand control

A wired hand control option iScroll/iGlue (a certified MFi accessory) provides a 'plug in and go' serial control. No setting up, no batteries - quick and secure.

Super VideoSelfie capability

Great for video Selfies, PiP (Picture in Prompting) overlays the FaceTime video output in a small window in the prompt display. The saved video can then be emailed direct to a destination such as YouTube.

picoPrompt is available from the Apple App store on iTunes. The hardware controller iScroll and the MFi interface adaptor iGlue are available direct from CueScript.

There's more to picoPrompt than meets the eye...

For more information on the picoPrompt app, please contact Teleprompting Techniques.
